## EXECUTIVE SUMMARY

The Texas Lottery Commission 2007 Demographic Study of Texas Lottery Players surveyed 1,702 Texas citizens between mid-September and early October of 2007. Thirty-eight percent of survey respondents participated in Texas Lottery games in the past year, a decrease of seven percentage points from the 2006 survey and 13 percentage points from the 2005 survey. Reported participation has generally declined over time. As with the 2006 survey, there is a statistically significant difference in participation due to income and employment status (please see Table 1). General participation findings broken down by education, race, Hispanic origin, and age are not statistically significant. However, participation rates among demographic groups can vary by the type of game played.

## Highlights

If we examine the findings using lottery district as the unit of analysis, we find the following results for participation rates and personal expenditures:

- Participation rates in any Texas Lottery games were highest in the McAllen (51.3 percent), Irving (41.9 percent), and Austin (41.6 percent) lottery districts (see Table 3). The lowest rates were seen in the Lubbock ( 32.1 percent) and El Paso (30.2 percent) districts.
- In this sample the lottery districts demonstrating the highest average monthly amount spent per player were Lubbock (\$74.25) and San Antonio (\$36.08). The lowest average monthly amount spent per player was found in the Victoria (\$10.85 mean) and McAllen (\$14.89) districts.
- A brief summary of game results follows:

Pick 3 Day: Over seventeen percent (17.6\%) of respondents playing any lottery game in the past year played Pick 3 Day. Thirty-seven percent of the respondents that purchased Pick 3 Day tickets purchased them at least once a week. Twenty-three percent purchased tickets at least once a month, and $40 \%$ purchased Pick 3 Day tickets a few times a year.

Pick 3 Night: Slightly over eleven percent (11.2\%) of respondents playing any lottery game in the past year played Pick 3 Night. Fifty-two percent of the respondents that purchased Pick 3 Night tickets purchased them at least once a week. Sixteen percent purchased tickets at least once a month, and 32\% purchased Pick 3 Night tickets a few times a year.

Cash 5: Nearly twenty-two percent (21.7\%) of respondents playing any lottery game in the past year were playing Cash 5 . Thirty-one percent of the respondents that purchased Cash 5 tickets purchased them at least once a week. Twenty-nine percent purchased tickets at least once a month, and $40 \%$ purchased Cash 5 tickets a few times a year.

Lotto Texas: Approximately 85 percent of respondents playing any lottery game in the past year were playing Lotto Texas. Over one-third (34.6\%) of the respondents that purchased Lotto Texas tickets purchased them at least once a week. Approximately thirty percent purchased tickets at least once a month, and $35.5 \%$ purchased Lotto Texas tickets a few times a year.

Texas Lottery Scratch Off Tickets: Almost half of respondents (48.9\%) of respondents playing any lottery game in the past year played Texas Lottery Scratch Off Tickets. Slightly more than $34 \%$ of the respondents that purchased Texas Lottery Scratch Off tickets purchased them at least once a week. Close to thirty-two percent (31.7\%) purchased tickets at least once a month, and 33.5\% purchased tickets a few times a year.

Texas Two Step: Ten percent of respondents playing any lottery game in the past year played Texas Two Step. One-third (33.3\%) of Texas Two Step players purchased tickets at least once a week and over $28 \%$ purchased tickets at least once a month, and $37.9 \%$ purchased tickets a few times a year.

Mega Millions: Forty-four percent of respondents playing any lottery game in the past year reported playing Mega Millions. Thirty percent of the respondents that purchased Mega Millions tickets bought them at least once a week, $28 \%$ purchased tickets at least once a month, and 43\% purchased tickets a few times a year.

Megaplier: Nearly thirteen percent (12.84\%) of respondents playing any lottery game in the past year played Megaplier. Thirty-two percent of Megaplier players purchased tickets at least once a week, $21.5 \%$ purchased tickets at least once a month, and approximately $46 \%$ purchased tickets a few times a year.

## New Feature

In addition to the basic results that ensure continuity of information and presentation of prior studies, one new feature is added to this study:

- Cell Phone Users compared to Landline Users: There is a growing concern that the rise of cell phones can introduce an element of bias in the sample of telephone surveys. We find that the cell phone respondents are not appreciably different than the landline respondents in education, income, and race and ethnicity. There are differences in participation rates and gender. Cell phone users in this sample participated at a slightly higher rate ( $45 \% \mathrm{v}$. $38 \%$ ) and are more likely to be male.

## I. INTRODUCTION AND METHOD OF ANALYSIS

A random survey of adult Texas residents was conducted during September/October 2007. The objectives were to measure the citizen participation rates, the distribution and frequency of play, and the demographic profiles of the past-year players and the non-players.

On behalf of the Texas Lottery Commission, the data collection and analysis was prepared under the auspices of the University of Houston Center for Public Policy (CPP) (www.uh.edu/cpp). The individuals who worked on this study are listed in alphabetical order:

Katherine Barillas
Renée Cross
Tom Duncavage
Jim Granato
Rose Kowalski
Thanapan Laiprakobsup
Chris Mainka
Terry Mayes
Richard Murray
Matt Soltis
Random digit dialing (RDD) was the sampling method used because it offers the best coverage of active telephone numbers and because it reduces sample bias.

The RDD method ensures the following:

- The conceptual frame and sampling frame match;
- The sample includes unlisted telephone numbers;
- The sampling frame is current, thus maximizing the probability that new residents are included; and
- There is comparability between land line surveys and surveys of cell phone users.

The Center for Public Policy's Survey Research Institute (SRI) (www.uh.edu/cpp/sri.htm) completed 1,702 usable interviews which yielded a margin of error of $+/-2.4$ percent at the 95 percent confidence level. The data for the survey were collected between September 12 and October 3, 2007. Note that in some cases, the subset samples will be small and this can create high volatility in some results in those categories. The subset proportions are an approximation of the overall population; however, the relatively small size of subsets can allow for outliers to "bias" results when using the mean. We alert the reader to the influence of outliers throughout the report.

The standard SRI survey administration and management protocols include:

- The use of trained telephone interviewers to conduct the survey.
- Each interviewer completes intensive general training. The purposes of general training are to ensure that interviewers understand and practice all of the basic skills needed to conduct interviews and that they are knowledgeable about standard interviewing conventions.
- Following the usual administration and management protocols, the interviewers also participate in a specific training session for the project.
- Interviewers practice administering the survey to become familiar with the questions.

The Texas Lottery Commission provided a survey instrument designed to collect demographic data on adult Texans. The survey included past-year players and non-players and measured lottery participation rates, the frequency of lottery participation, and lottery spending patterns. The survey instrument used by the CPP was consistent with those used in previous years.

The major change from prior surveys is the addition of cell phone users as part of the overall sample. Previous annual studies of lottery players and non-players in Texas have utilized the standard methodology for conducting random digit dial (RDD) surveys. This entails calling residential telephone numbers (landlines) randomly selected from a list of working numbers in homes that are not business lines. Because RDD sampling includes unlisted residential numbers, it is considered superior to methods that rely on published telephone numbers in generating samples. However, with the rapid increase in cell phone usage, traditional RDD sampling has been increasingly questioned because more and more individuals are exclusive users of cellular phones and therefore are excluded from RDD surveys that rely on traditional methods. With estimates of non-landline phone users now ranging between 8 and 13 percent, sample bias in standard RDD polling is a major issue in the field.

To address this potential problem, Survey Sampling Inc., the largest RDD sample vendor in the United States, has recently begun selling cell phone samples to supplement traditional sets of numbers. The UH Center for Public Policy Survey Center took advantage of this new capacity and bought a cell phone sub-sample of numbers for the 2007 Texas Lottery Study in addition to the standard statewide RDD sample. The data included in this report are based on 1528 completed interviews on standard landlines and 174 completed interviews (10.2\%) from the cell phone sample. This combination, in our judgment, improves the quality of the overall data by including individuals who might be excluded using traditional sampling methods.

## II. SAMPLE CHARACTERISTICS ${ }^{1}$

Selected questions regarding each lottery game were cross-tabulated with the following six demographic categories:

- Income
- Employment status
- Years of education
- Age of respondent
- Gender of respondent
- Race/ethnicity of respondent

In the social sciences, the variability in distribution of outcomes is common. At various points in this analysis, we will test to determine whether changes or differences between categories or groups are due to random chance. Traditional tests for statistical "significance" are used to test for differences between past-year players and non-players or for differences between past-year players (by demographic category). ${ }^{2}$
${ }^{1}$ Note that discrepancies between total sample size and various variables are due to respondents either refusing to answer or saying they did not know. Consider the "Income" variable. We have a reduction in the total sample (who report their income) from 1702 to 1265 . The cell percentage for the column with the full sample has the denominator 1265 and not 1702. Consequently, the percentage of the adjusted "full" sample containing respondents earning less than $\$ 12,000$ is $105 / 1265$ or 8.3 percent as opposed to 105/1702 or 6.2 percent.

2 We use standard t-tests on the "equality of means." Note also that discussions of statistical "significance" reflect classical statistical (or "frequentist") tradition. The "level" of statistical significance (denoted by a p-value) tells us the probability that what was observed differs from the null hypothesis (of no relation or no difference). In the classical tradition a p-value of .05 indicates that in, say, 100 repeated samples, the value realized would fall within a given interval 95 out of 100 samples. To extend this further, a p-value of . 001 means that the result would fall within a pre-specified interval in over 99 out of 100 samples. The closer the $p$-value is to zero the stronger the finding.

- Approximately twenty percent of all respondents had a household annual income of between $\$ 40,000(10.51 \%)$ and $\$ 59,999$ ( $9.72 \%$ ). Approximately twenty-seven percent had an income of $\$ 75,000$ or more. A higher percentage of non-players (20.35\%) than past-year players (13.59\%) had an annual household income of less than $\$ 20,000$. Nearly sixteen percent (15.72\%) of non-players had a household annual income over \$100,000. Meanwhile, eighteen percent of past-year players had a household annual income over \$100,000.
- Approximately forty-six percent (46.27\%) of the respondents were employed full-time. Fifty-seven percent (56.7\%) of past-year players and forty percent (39.69\%) of non-players were employed full-time.
- Seventy-eight percent (78.21\%) of all respondents owned their home. Nineteen percent rented and nearly 3 percent (2.79\%) occupied their home without payment.
- Forty percent (39.97\%) of the respondents were between the ages of 45 to 64 . The average age for all respondents was 50.41. A greater percentage of non-players (28.93\%) than past-year players (21.62\%) were 65 and over. A greater percentage of past-year players $(23.50 \%)$ than non-players (17.04\%) were between the ages of 44 to 54 .
- Approximately sixty-four percent (64.29\%) of past-year players were married. Of the nonplayers, $58.40 \%$ were married.
- Thirty-two percent of the respondents that were past-year players had children under 18 living in their household. Thirty-three percent of the respondents that were non-players had children under 18 living in their household.
- Fifty-six percent (55.51\%) of the respondents were female. Forty-four percent (44.49\%) were male respondents.
- Approximately two-thirds of all respondents were White. Whites comprised sixty-six percent ( $65.79 \%$ ) of all past-year players but also sixty-eight percent of (67.64\%) of non-players.
- Eighteen percent of the respondents stated they were of Hispanic descent. Past-year players (18.69\%) and non-players (18.23\%) were equally likely to have Hispanic origin.
- Thirty-seven percent of all respondents had a college degree ( $24.50 \%$ ) or a graduate/professional degree (12.72\%). A larger percentage of past-year players (29.45\%) than non-players (21.97\%) had some college education. Thirty-eight percent of non-players (37.58\%) and thirty-seven percent of past-year players (36.62\%) had a college degree or more.
- Approximately thirty-one percent of all respondents (30.88\%) said that their occupations were categorized as "professional specialty." Thirty-two percent of non-players (31.70\%) and thirty percent of past-year players (29.67\%) classified their occupations as professional specialty. Sales (13.03\%), executive, administrative, and managerial occupations (11.85 percent) were the second and third largest groups respectively.

## III. GAME FINDINGS

## IIIa. ANY GAME RESULTS

Figure 1
Percentage of Respondents Playing Any Lottery Game

Source: 2007 CPP survey data, 2006 UNT survey reports and survey reports from 1993-2005.
Figure 1 compares Texas lottery participation rates of those playing any of the Texas Lottery games during the past year from the Lottery's inception in 1993 to the present. The percentage of respondents playing any lottery game has decreased substantially since 1993, with the most recent annual decrease at 7 percentage points.

The average monthly dollar amount spent on any lottery game, excluding outlying values, was $\$ 53.63$. Following the projection formula used in both the 2005 and 2006 studies, we applied a "weighted" average monthly dollar amount spent and extrapolated it to the Texas population to compare with actual revenue. ${ }^{5}$ Our survey data provided for estimated annual sales in Texas to be approximately $\$ 4.190$ billion. When applying the margin of error calculation for this subset of the sample, the expected forecast of actual lottery sales ranged between $\$ 4.088$ billion and $\$ 4.290$ billion. This range is higher than actual annual lottery ticket sales for fiscal year 2006 of $\$ 3.775$ billion dollars.

[^1]Table 2
Any Game: Past-Year Lottery Play and Median Dollars Spent per Month by Demographics

| Demographic Factors | Percentage played ${ }^{6}$ | Median Dollars Spent |
| :---: | :---: | :---: |
| Education |  |  |
| Less than high school diploma | 27.3 | 61.00 |
| High school degree | 36.5 | 15.00 |
| Some college | 45.7 | 15.00 |
| College degree | 41.1 | 8.00 |
| Graduate degree | 32.1 | 5.00 |
| Income |  |  |
| Under \$12,000 | 28.6 | 9.50 |
| \$12,000 to \$19,999 | 33.1 | 10.00 |
| \$20,000 to \$29,999 | 38.9 | 20.00 |
| \$30,000 to \$39,999 | 40.1 | 16.00 |
| \$40,000 to \$49,999 | 36.8 | 22.00 |
| \$50,000 to \$59,999 | 43.1 | 10.00 |
| \$60,000 to \$74,999 | 43.5 | 13.00 |
| \$75,000 to \$100,000 | 50.0 | 5.00 |
| Over \$100,000 | 43.1 | 9.50 |
| Race |  |  |
| White | 37.9 | 10.00 |
| Black | 39.8 | 20.00 |
| Asian | 37.0 | 22.00 |
| Native American Indian | 41.2 | 49.00 |
| Other | 40.1 | 15.00 |
| Hispanic origin <br> Yes | 39.0 | 17.00 |
| No | 38.2 | 10.00 |
| Gender* |  |  |
| Female | 36.1 | 10.00 |
| Male | 41.5 | 13.00 |
| Age |  |  |
| 18 to 24 | 17.0 | 12.00 |
| 25 to 34 | 35.7 | 27.00 |
| 35 to 44 | 41.7 | 10.00 |
| 45 to 54 | 46.2 | 12.00 |
| 55 to 64 | 46.4 | 9.00 |
| 65 or older | 32.2 | 12.00 |
| Employment status*** Employed full/part time | 45.2 | 10.00 |
| Unemployed | 17.1 | 16.50 |
| Retired | 33.2 | 12.00 |

Note: * $\mathrm{p}<0.05$, ** $\mathrm{p}<0.01$, *** $\mathrm{p}<0.001$.

[^2]Table 2 shows the percentage of past-year players was higher among respondents employed full-time and part-time compared to unemployed and retired respondents. Participation findings for education, income, race, Hispanic origin, and age of the respondents were not statistically significant.

Table 3
Participation and Dollars Spent by Lottery District

| District | Percent Playing Any <br> Game | Mean Amount Spent Per <br> Month among Lottery <br> Past-Year Players | Median Amount Spent Per <br> Month among Lottery <br> Past-Year Players |
| :--- | :---: | :---: | :---: |
| Abilene | 36.0 | $\$ 23.71$ | $\$ 10.00$ |
| Austin | 41.6 | 25.79 | 10.00 |
| El Paso | 30.2 | 17.15 | 5.00 |
| Houston | 37.1 | 27.24 | 10.00 |
| Irving | 41.9 | 27.86 | 10.00 |
| Lubbock | 32.1 | 74.25 | 5.00 |
| McAllen | 51.3 | 14.89 | 8.50 |
| San Antonio | 36.2 | 36.08 | 12.00 |
| Tyler | 38.3 | 16.32 | 5.00 |
| Victoria | 40.3 | 10.85 | 8.00 |

- As shown in Table 3, participation rates in any Texas Lottery games were highest in the McAllen (51.3\%), Irving (41.9\%), and Austin (41.6\%) lottery districts respectively. The lowest rates were seen in the Lubbock (32.1\%) and El Paso (30.2\%) districts.
- The lottery districts demonstrating the highest average monthly amount spent per player were Lubbock (\$74.25) and San Antonio (\$36.08). The lowest average monthly amount spent per player was found in the Victoria (\$10.85 mean) and McAllen (\$14.89) districts.

IIIb. PICK 3 DAY RESULTS

Figure 2
Percentage Playing Pick 3 Day

Source: Center for Public Policy 2007 survey data and additional survey reports 2003-2006

Figure 2 illustrates that 17.6 percent of respondents playing any lottery game in the past year played Pick 3 Day.

Figure 3
Frequency of Purchasing Pick 3 Day Tickets ( $\mathrm{n}=115$ )

As Figure 3 illustrates, thirty-seven percent of the respondents that purchased Pick 3 Day tickets purchased them at least once a week. Twenty-three percent purchased tickets at least once a month, and forty percent purchased Pick 3 Day tickets a few times a year.

Table 4
Average Times Played Pick 3 Day

| Played Pick 3 Day | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 2.30 |
| Per month for monthly past-year players | 1.44 |
| Per year for yearly past-year players | 3.29 |

Table 4 shows that respondents played an average number of 2.30 times per week, 1.44 times per month, or 3.29 times per year. Weekly, monthly, and yearly rates are distinct from each other. As in prior studies we code the data in the following way: if a respondent answered that they played weekly, they were not asked if they played monthly or yearly. ${ }^{\text {. }}$

Table 5
Dollars Spent on Pick 3 Day

| Pick 3 Day | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 7.11$ |
| Average spent per month (mean) | 22.13 |
| Average spent per month (median) | 15.00 |

Table 5 shows that Pick 3 Day players spent an average of $\$ 7.11$ per play while monthly players spent an average of $\$ 22.13$ per month.

As shown in the following table on the next page, there were significant differences among demographic groups regarding the percentage that played Pick 3 Day. Table 6 shows:

- The percentage of past year players that played Pick 3 Day decreased as education and income increased.
- Participation was higher among African Americans, Native American Indians, and those of Hispanic origin.
- However, participation findings for age, gender, and employment status were not statistically significant. ${ }^{8}$

[^3]Table 6
Pick 3 Day: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Pick 3 Day | Percentage Played | Median Dollars Spent |
| :---: | :---: | :---: |
| Education** |  |  |
| Less than high school diploma | 31.6 | 40.00 |
| High school degree | 18.5 | 15.00 |
| Some college | 20.8 | 15.00 |
| College degree | 12.5 | 8.00 |
| Graduate degree | 11.6 | 20.00 |
| Income** |  |  |
| Under \$12,000 | 20.0 | 2.00 |
| \$12,000 to \$19,999 | 30.8 | 15.00 |
| \$20,000 to \$29,999 | 26.9 | 20.00 |
| \$30,000 to \$39,999 | 19.7 | 15.00 |
| \$40,000 to \$49,999 | 12.2 | 10.00 |
| \$50,000 to \$50,999 | 17.0 | 10.00 |
| \$60,000 to \$74,999 | 16.7 | 2.00 |
| \$75,000 to \$100,000 | 14.9 | 10.00 |
| Over \$100,000 | 10.2 | 3.00 |
| Race* |  |  |
| White | 12.68 | 10.00 |
| Black | 36.47 | 15.00 |
| Asian | 10 | 8.00 |
| Native American Indian | 42.86 | 23.00 |
| Other | 20.34 | 12.00 |
| Hispanic Origin* |  |  |
| Yes | 25.00 | 12.00 |
| No | 15.71 | 15.00 |
| Gender |  |  |
| Female | 17.01 | 15.00 |
| Male | 18.27 | 15.00 |
| Age |  |  |
| 18 to 24 | 23.53 | 5.00 |
| 25 to 34 | 22.86 | 10.00 |
| 35 to 44 | 18.69 | 15.00 |
| 45 to 54 | 17.36 | 15.00 |
| 55 to 64 | 13.64 | 15.00 |
| 65 or older | 20.59 | 12.00 |
| Employment status |  |  |
| Employed full/part time | 15.65 | 15.00 |
| Unemployed | 26.47 | 23.00 |
| Retired | 18.86 | 12.00 |

Note: ${ }^{*}=\mathrm{p}<0.05,{ }^{* *}=\mathrm{p}<0.01$, and ${ }^{* * *}=\mathrm{p}<0.001$.

Figure 4
Years Playing Pick 3 Day
( $\mathrm{n}=114$ )

Figure 4 illustrates that approximately fifty-eight percent of the respondents that played Pick 3 Day reported playing it more than 5 years.

IIIc. PICK 3 NIGHT RESULTS

Figure 5
Percentage Playing Pick 3 Night

Source: 2007 CPP survey data and additional survey reports 2003-2006

Figure 5 illustrates that slightly over eleven percent of respondents playing any lottery game in the past year played Pick 3 Night. This is approximately half of those playing in 2006.

Figure 6
Frequency of Purchasing Pick 3 Night Tickets
( $\mathrm{n}=71$ )

Figure 6 shows that over half (52\%) of the respondents that purchased Pick 3 Night tickets purchased them at least once a week. Sixteen percent purchased tickets at least once a month, and $32 \%$ purchased Pick 3 Night tickets a few times a year.

Table 7
Average Times Played Pick 3 Night

| Pick 3 Night | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 3.13 |
| Per month for monthly past-year players | 2.00 |
| Per year for yearly past-year players | 4.44 |

Table 7 shows that respondents played an average number of 3.13 times per week, 2.00 times per month, or 4.44 times per year.

Table 8
Dollars Spent on Pick 3 Night

| Pick 3 Night | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 6.99$ |
| Average spent per month (mean) | 18.02 |
| Average spent per month (median) | 12.00 |

Table 8 illustrates the amount of dollars spent on Pick 3 Night. Pick 3 Night players spent an average of $\$ 6.99$ per play while players spent an average of $\$ 18.02$ per month.

When looking at demographic characteristics, there were significant differences among the people playing Pick 3 Night. Table 9 on the following page illustrates the following:

- The percentage of respondents that played Pick 3 Night was higher among respondents with less than a high school education.
- As income increased, participation generally decreased.
- Participation findings for race, gender, age, Hispanic origin, and employment status were not statistically significant.
- Note that the result for Native American Indians is driven by their relatively small sample ( $\mathrm{n}=7$ for past-year players).
- Respondents in the "Graduate Degree" and "\$40,000 to 49,999" categories did not indicate a dollar amount spent.

Table 9
Pick 3 Night: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Pick 3 Night | Percentage Played ${ }^{9}$ | Median Dollars Spent |
| :---: | :---: | :---: |
| Education*** |  |  |
| Less than high school diploma | 23.7 | \$20.00 |
| High school degree | 14.8 | 15.00 |

| 65 or older | 10.3 | 8.00 |
| Employment status |  |  |
| Employed full/part time | 11.1 | 15.00 |
| Unemployed | 13.2 | 20.00 |
| Retired | 10.9 | 6.00 |

Note: *p < 0.05, ** p $<0.01,{ }^{* * *} \mathrm{p}<0.001$.

[^4]Figure 7
Years Playing Pick 3 Night
( $\mathrm{n}=73$ )

Figure 7 shows that slightly more than a majority of the respondents (52\%) that played Pick 3 Night reported playing it for more than 5 years.

## IIId. CASH 5 RESULTS

Figure 8
Percentage Playing Cash 5

Source: 2007 CPP survey data and additional survey reports 2001-2006

Figure 8 illustrates that $21.7 \%$ of respondents playing any lottery game in the past year were playing Cash 5 . This is the lowest Cash 5 participation rate among past-year lottery players since 2001.

Figure 9
Frequency of Purchasing Cash 5 Tickets
( $\mathrm{n}=142$ )

Thirty-one percent of the respondents that purchased Cash 5 tickets purchased them at least once a week as shown in Figure 9. Twenty-nine percent purchased tickets at least once a month, and $40 \%$ purchased Cash 5 tickets a few times a year.

Table 10
Average Times Played Cash 5

| Cash $\mathbf{5}$ | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 2.21 |
| Per month for monthly past-year players | 1.49 |
| Per year for yearly past-year players | 3.92 |

Table 10 shows that respondents played an average number of 2.21 times per week, 1.49 times per month, and 3.92 times per year.

Table 11
Dollars Spent on Cash 5

| Cash 5 | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 6.49$ |
| Average spent per month (mean) | 20.29 |
| Average spent per month (median) | 10.00 |

Table 11 shows that Cash 5 players spend an average of $\$ 6.49$ per play, while weekly or monthly players spent an average of $\$ 20.29$ per month.

Table 12 on the following page shows significant differences among demographic groups regarding the percentage that played Cash 5.

- Education levels varied among the respondents that played Cash 5.
- When looking at race, participation was higher among Black and Native American Indian respondents.
- Income was statistically significant: those with higher incomes bought Cash 5 tickets less.
- Participation findings for gender, age, Hispanic origin, and employment status were not statistically significant.

Table 12
Cash 5: Lottery Play and Median Dollars Spent per Month by Past-Year Cash 5 Player Demographics

Investy of mousim

Figure 10
Years Playing Cash 5
( $\mathrm{n}=139$ )

Figure 10 illustrates that sixty-three percent of the respondents that played Cash 5 reported playing it for more than five years.

## IIIe. LOTTO TEXAS RESULTS

Figure 11
Percentage Playing Lotto Texas

Source: Center for Public Policy 2007 survey data and additional survey reports 2003-2006

Figure 11 illustrates that 84.7 percent of respondents playing any lottery game in the past year were playing Lotto Texas.

Figure 12
Frequency of Purchasing Lotto Texas Tickets ( $\mathrm{n}=535$ )

Over one-third (35\%) of the respondents that purchased Lotto Texas tickets purchased them at least once a week as illustrated in Figure 12. Thirty-five percent also purchased Lotto Texas tickets a few times a year while thirty percent purchased tickets at least once a month.

Table 13
Average Times Played Lotto Texas

| Lotto Texas | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 1.72 |
| Per month for monthly past-year players | 1.79 |
| Per year for yearly past-year players | 4.21 |

Lotto Texas players played an average of 1.72 times per week, 1.79 times per month, or 4.21 times per year as shown in Table 13.

Table 14
Dollars Spent on Lotto Texas

| Lotto Texas | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 22.24$ |
| Average spent per month (mean) | 26.46 |
| Average spent per month (median) | 10.00 |

Table 14 illustrates that Lotto Texas players spent an average of $\$ 22.24$ per play while monthly players spent an average of $\$ 26.46$ a month.

Unlike the results found with some of the other games such as Cash 5, there were no significant differences among demographic groups regarding the percentage that played Lotto Texas. See Table 15 on the following page.

Table 15
Lotto Texas Players and Median Dollars Spent per Month by Past-Year Player Demographics

| Lotto Texas | Percentage Played | Median dollars spent |
| :---: | :---: | :---: |

Figure 13
Years Playing Lotto Texas
( $\mathrm{n}=533$ )

Source: Center for Public Policy 2007 survey data and additional survey reports 2003-2006

Nearly eighty percent (79.2\%) of the respondents that played Lotto Texas played it for more than 5 years as shown in Figure 13.

## IIIf. TEXAS LOTTERY SCRATCH OFF TICKETS RESULTS

Figure 14
Percentage Playing Texas Lottery Scratch Off Tickets

Source: Center for Public Policy 2007 survey data and additional survey reports 2003-2006

Figure 14 demonstrates that almost half (48.9\%) of respondents playing any lottery game in the past year played Texas Lottery Scratch Off tickets.

Figure 15
Frequency of Purchasing Texas Lottery Scratch Off Tickets ( $\mathrm{n}=319$ )

Nearly thirty-five percent (34.8\%) of the respondents that purchased Texas Lottery Scratch Off tickets purchased them at least once a week as illustrated in Figure 15. Nearly thirty-two percent (31.7\%) purchased tickets at least once a month, and one-third (33.5\%) purchased tickets a few times a year.

Table 16
Average Time Played Texas Lottery Scratch Off Tickets

| Texas Lottery Scratch Off | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 2.67 |
| Per month for monthly past-year players | 2.11 |
| Per year for yearly past-year players | 6.32 |

Table 16 shows that respondents that played Texas Lottery Scratch Off tickets played an average number of 2.67 times a week, 2.11 times a month, and 6.32 times a year.

Table 17
Dollars Spent on Texas Lottery Scratch Off Tickets

| Texas Lottery Scratch Off Tickets | Dollars Spent |
| :--- | :---: |
| Average spent per play $^{11}$ | $\$ 13.20$ |
| Average spent per month (mean) $^{12}$ | 33.27 |
| Average spent per month (median) | 10.00 |

Texas Lottery Scratch Off players spent an average of $\$ 13.20$ per play while monthly players spent an average of $\$ 33.27$ a month as illustrated in Table 17.

As Table 18 illustrates on the following page, there were significant differences among demographic groups regarding the percentage that played Texas Lottery Scratch Off Tickets.

The percentage of respondents that played the scratch off tickets fell as education level increased.

Playing scratch off tickets was generally more likely among respondents with incomes of $\$ 12,000$ to $\$ 29,999$. The least likely participants, by income category, were respondents who earned between $\$ 50,000$ to $\$ 59,999$. Respondents who earned between $\$ 30,000$ to $\$ 39,999$, or \$75,000 and over participated at nearly identical percentages.

Over seventy-six percent of those in the 18 to 24 age category played Texas Lottery Scratch Off Tickets.

[^5]Table 18
Texas Lottery Scratch Off Tickets: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Texas Lottery Scratch Off Tickets | Percentage Played | Median Dollars Spent |
| :---: | :---: | :---: |

Figure 16
Years Playing Texas Lottery Scratch Off Tickets ( $\mathrm{n}=318$ )

As shown in Figure 16, over 80\% of the respondents that played Texas Lottery Scratch Off Tickets reported playing them for more than 5 years.

## IIIg. TEXAS TWO STEP RESULTS

Figure 17
Percentage Playing Texas Two Step

Figure 17 illustrates that slightly more than ten percent (10.1\%) of respondents playing any lottery game in the past year played Texas Two Step. This is the lowest percentage of Texas Two Step players found in the years 2003-2007.

Figure 18
Frequency of Purchasing Texas Two Step Tickets ( $\mathrm{n}=66$ )

Figure 18 shows that one-third (33.3\%) of the respondents that purchased Texas Two Step tickets bought them at least once a week.

Nearly twenty-nine percent (28.8\%) purchased tickets at least once a month, and 37.9 percent purchased tickets a few times a year.

Table 19
Average Time Played Texas Two Step

| Texas Two Step Players | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 1.91 |
| Per month for monthly past-year players | 1.33 |
| Per year for yearly past-year players | 11.64 |

Table 19 indicates that respondents playing Texas Two Step played an average of 1.91 times a week, 1.33 times a month, or 11.64 times a year.

Table 20
Dollars Spent on Texas Two Step

| Texas Two Step Players | Dollars Spent |
| :--- | :---: |
| Average spent per play $^{13}$ | $\$ 8.25$ |
| Average spent per month (mean) | 18.27 |
| Average spent per month (median) | 12.00 |

Respondents playing Texas Two Step spent an average of $\$ 8.25$ per play, the mean expenditure was $\$ 18.27$ a month and the median expenditure was $\$ 12.00$ as listed in Table 20.

Table 21 indicates that education and age have statistically significant effects on participation. These differences are within their respective categories. Furthermore, respondents under the age of 34 and with at least a university degree are far less likely to play Texas Two Step.

Table 21
Texas Two Step: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Texas Two Step | Percentage Played | Median Dollars Spent |
| :--- | :---: | :---: |
| Education** <br> Less than high school diploma | 13.2 |  |

[^7]Figure 19
Years Playing Texas Two Step
( $\mathrm{n}=61$ )

Sixty-one percent (60.7\%) of the respondents that played Texas Two Step reported playing it for more than 5 years as illustrated in Figure 19.

## IIIh. MEGA MILLIONS RESULTS

Figure 20
Percentage Playing Mega Millions

Source: Center for Public Policy 2007 survey data and additional survey reports from 2001-2006

Figure 20 shows that $44 \%$ of respondents playing any lottery game in the past year said that they played Mega Millions. This was a decrease of almost ten percent from 2006 to 2007 yet the participation in Mega Millions was still higher in 2007 than it was when the game was introduced in 2004.

Figure 21
Frequency of Purchasing Mega Millions Tickets ( $\mathrm{n}=286$ )

Approximately thirty percent of respondents purchased Mega Millions tickets at least once a week (see Figure 21). Nearly twenty-eight percent said that they purchased Mega Millions tickets once a month and forty-three percent of the respondents purchased Mega Millions tickets a few times a year.

Table 22
Average Times Played Mega Millions

| Mega Millions | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 1.55 |
| Per month for monthly past-year players | 1.88 |
| Per year for yearly past-year players | 3.2 |

As shown in Table 22, respondents that played Mega Millions tickets played an average of 1.55 times per week, 1.88 times per month, and 3.2 times per year, respectively.

Table 23
Dollars Spent on Mega Millions

| Mega Millions | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 5.85^{16}$ |
| Average spent per month (mean) | $12.15^{17}$ |
| Average spent per month (median) | $8.00^{18}$ |

Mega Millions players spent an average of $\$ 5.85$ per play and monthly players spent an average of $\$ 12.15$ per month as shown in Table 23. Approximately half of the respondents were likely to spend $\$ 8.00$ or more a month on purchasing Mega Millions tickets.

There are no statistically significant demographic differences between past-year Mega Millions players and their counterparts.

As shown in Table 24 on the next page, the percentage of respondents that played Mega Millions varied somewhat by age and income. However, these variations were not statistically significant.

[^8]Table 24
Mega Millions: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Mega Millions | Percentage Played | Median Dollars Spent |
| :---: | :---: | :---: |
| Education |  |  |

Figure 22
Years Playing Mega Millions
( $n=286$ )

Approximately twenty percent of the respondents mentioned that they have been playing Mega Millions for less than two years. Meanwhile forty-four percent of the respondents have been playing Mega Millions for more than 5 years.

## IIII. MEGAPLIER RESULTS

Figure 23
Percentage Playing Megaplier

Source: Center for Public Policy 2007 survey data and reports from 2001-2006

Figure 23 illustrates that nearly thirteen percent (12.84\%) of the respondents playing any lottery game in the past year played Megaplier.

Figure 24
Frequency of Purchasing Megaplier Tickets ( $\mathrm{n}=83$ )

Slightly more than thirty-two percent (32.53\%) of the respondents that purchased Megaplier tickets purchased them at least once a week.

Twenty-two percent purchased tickets at least once a month and $45.78 \%$ purchased tickets a few times a year.

Table 25
Average Times Played Megaplier

| Megaplier | Average Number of Times Played |
| :--- | :---: |
| Per week for weekly past-year players | 2.45 |
| Per month for monthly past-year players | 1.64 |
| Per year for yearly past-year players | 3.86 |

Respondents playing Megaplier played an average number of 2.45 times per week, 1.64 times per month, or 3.86 times per year as shown in Table 25.

Table 26
Dollars Spent on Megaplier

| Megaplier | Dollars Spent |
| :--- | :---: |
| Average spent per play | $\$ 5.81$ |
| Average spent per month (mean) | $21.41^{19}$ |
| Average spent per month (median) | $9.00^{20}$ |

Table 26 shows that Megaplier players spent an average of $\$ 5.81$ per play. An average of $\$ 21.41$ was spent per month.

[^9]Table 27
Megaplier: Lottery Play and Median Dollars Spent per Month by Past-Year Player Demographics

| Megaplier | Percentage Played $^{\mathbf{2 1}}$ | Median Dollars Spent |
| :--- | :---: | :---: |
| Education <br> Less than high school diploma | 10.53 |  |
| High school degree | 13.19 | $\$ 17.50$ |
| Some college | 14.21 | 8.00 |

| Retired | 8.7 | $4.50^{31}$ |

Note: * $p<0.05,{ }^{* *} p<0.01$, *** $p<0.001$.

Employment status is the only significantly different demographic factor among those that played Megaplier in the past year (see Table 27).

[^10]Investry of mousim

Figure 25
Years Playing Megaplier
( $\mathrm{n}=81$ )

Forty-seven percent (46.91\%) of the respondents that played Megaplier reported playing the game for more than 5 years while approximately $17 \%$ percent of the Megaplier players reported playing the game for less than 2 years.

## IV. SUMMARY

The Texas Lottery Commission's 2007 Demographic Study of Texas Lottery Players surveyed 1,702 Texas citizens between September 12 and October 3, 2007. Thirty-eight percent of survey respondents participated in Texas Lottery games in the past year, a decrease of 7 percentage points from the 2006 survey and 13 percentage points from the 2005 survey. In general, reported participation has declined over time.

When we examine the behavior of past-year players, the data suggests that the effects of education, race, Hispanic origin, and age are not statistically significant for their overall participation rates. However, participation rates among demographic groups can vary by the type of game.

In keeping with the findings of the 2006 survey, the most popular game remains Lotto Texas (85 percent). While Texas Two Step was the least popular game last year, there was essentially a three way tie for the least popular game in 2007. The three least popular games included Pick 3 Night (11.2\%), Texas Two Step (10.1\%), and Megaplier (12.84\%). The game with the highest average monthly expenditure (\$33.27) was Texas Lottery Scratch Offs.

An examination of the lottery districts reveals that participation rates in any Texas Lottery game was highest in the McAllen (51.3\%), Irving (41.9\%), and Austin (41.6\%) lottery districts (see Table 3). The lowest rates were seen in the Lubbock (32.1\%) and El Paso (30.2\%) districts. In terms of expenditures, we find that the Lubbock ( $\$ 74.25$ mean) and San Antonio ( $\$ 36.08$ mean) lottery districts demonstrated the highest average monthly expenditures per player. The Victoria ( $\$ 10.85$ mean) and McAllen (\$14.89 mean) lottery districts demonstrated the lowest average monthly personal expenditures.

A new feature in the survey sampling was to include cell phone users in direct proportion to the general population. We find that the cell phone respondents are not appreciably different than the landline respondents in education, income, and race and ethnicity. There are differences in participation rates and gender. Cell phone users in this sample participated at a slightly higher rate ( $45 \%$ v. $38 \%$ ) and are more likely to be male.

## APPENDIX

Table A-1
Sample Population by County ${ }^{32}$
( $\mathrm{n}=1,662$ )

| County | Count | Percentage |
| :---: | :---: | :---: |

[^0]:    ${ }^{3}$ There was a significant difference between players and non-players at the $p<0.001$ level for distribution of income levels. In other words, the p-value indicates that only one time in 1,000 would different income distributions likely occur for players and non-players if this survey were repeated 1,000 times.
    ${ }^{4}$ There was a significant difference between players and non-players at the $p<0.001$ level for distribution of employment status.

[^1]:    ${ }^{5}$ The 2006 population estimate for persons 18 years and older is $17,131,069$. The source for this figure is the Texas State Data Center, Office of the State Demographer (http://txsdc.utsa.edu). We thank Karl Eschbach and Beverly Pecotte for their assistance.

[^2]:    ${ }^{6}$ The significance markings refer only to the percentage played.

[^3]:    ${ }^{7}$ We follow this coding method for each game regarding average time played.
    ${ }^{8}$ For Table 6, the significance markings refer only to the percentage played.

[^4]:    ${ }^{9}$ The significance markings refer only to the percentage played.

[^5]:    ${ }^{11}$ The mean for this category is $\$ 11.62$ when the outlier category of $\$ 500$ is excluded from the analysis.
    ${ }^{12}$ The mean for this category is $\$ 26.54$ when the outlier categories of $\$ 500, \$ 620$, and $\$ 630$ are excluded from the analysis.

[^6]:    ${ }^{13}$ The mean for this category is $\$ 3.84$ when the outlier categories of $\$ 50$ and $\$ 240$ (the upper bound limit) are excluded from the analysis.
    ${ }^{14}$ There were no observations in this category.
    intiscty of mousim

[^7]:    ${ }^{15}$ There were no observations for this category.

[^8]:    ${ }^{16}$ The average number of dollars spent per play excludes the respondents who indicated that they purchased more than $\$ 150$ of Mega Millions tickets per play. If those respondents are included, the average number of dollars spent for purchasing the tickets is $\$ 7.96$ per play.
    ${ }^{17}$ The average number of dollars spent per month on Mega Millions excludes the respondent(s) who indicated that they purchased more than $\$ 200$ of Mega Millions tickets per month. If those respondents are included, the average number of dollars spent for purchasing the tickets is $\$ 17.85$ dollars per month.
    ${ }^{18}$ When the respondents who purchased Mega Millions tickets and spent more than $\$ 200$ per month were included or excluded, the number of median dollars spent on the tickets did not change.

[^9]:    ${ }^{19}$ The mean for this category is $\$ 16.69$ when the outlier category (of $\$ 200$ ) is excluded from the analysis.
    ${ }^{20}$ The median for this category is $\$ 8.00$ when the outlier category (more than $\$ 200$ ) is excluded from the analysis.

[^10]:    ${ }^{27}$ The significance markings refer only to the percentage played.
    ${ }^{28}$ The median amount of money is $\$ 13.00$ if the outlier values spent on Megaplier are excluded.
    ${ }^{29}$ No respondents aged 18 to 24 played Megaplier in the past year.
    ${ }^{30}$ The median amount of money is $\$ 7.00$ if the outlier values spent on Megaplier are excluded.
    ${ }^{31}$ There were only two respondents in this category. The number shown in the table is the average of the actual amount of money which the respondents ( $\$ 1.00$ and $\$ 8.00$ dollars, respectively) spent on purchasing Megaplier.
