## Texas 2019: School Finance, Property Taxes and Spending

School finance and property tax reform including revenue caps and revenue enhancement options have garnered significant attention during the $86^{\text {th }}$ Texas Legislature. In a survey conducted between March 21 and April 1, 2019, the University of Houston Hobby School of Public Affairs examines support among Texas registered voters and within key population subgroups for property tax revenue caps, a wide variety of revenue enhancement options ranging from the raising of taxes to the closing of tax loopholes, and school spending. In addition, this report includes a conjoint analysis of the respondents' willingness to pay for different types of educational services.

The 1,000 survey respondents were matched on demographics and characteristics to the population of registered voters of Texas. The margin of sampling error is $+/-3.7 \%$. The margin of error for subgroups varies.

Using the survey, we examine support and opposition to these different policies among Texas registered voters overall as well as by the following aspects:

1) Where they live:

- Major metro core counties: Bexar, Dallas, Harris, Tarrant, and Travis
- Suburban counties including Brazoria, Collin, Denton, Fort Bend, Montgomery, and Williamson
- Mid-size regional hub counties such as Jefferson (Beaumont), Lubbock, Midland, McLennan (Waco), Nueces (Corpus Christi), and Smith (Tyler)
- Urban border counties including Cameron, El Paso, Hidalgo, and Webb
- Rural counties

2) Their generation based on their year of birth: Silent Generation (1928-45), Baby Boomers (1946-64), Gen-X (1965-80), Millennials and Post-Millennials (1981- present)
3) Their ethnicity or race: African American, Anglo, and Latino
4) Their partisanship: Democrat, Republican, and Independent
5) The combination of their ethnicity or race and partisanship: African American Democrats, Anglo Democrats, Anglo Republicans, Latino Democrats, and Latino Republicans

## KEY DIFFERENCES AMONG SUBGROUPS

- Overall, $92 \%$ of Anglo Republicans and $84 \%$ of Latino Republicans support property tax revenue cap legislation. Among Democrats however, support for the revenue cap differs substantially by ethnicity/race, with $85 \%$ of African American Democrats and

72\% of Latino Democrats in favor of the cap legislation, compared to only 56\% of Anglo Democrats.

- There are significant regional differences in support for the legalization and taxation of marijuana, with support lowest in the mid-size regional hub counties (52\%) and in the urban border (57\%) and rural (57\%) counties, and highest in the urban core (68\%) and suburban (63\%) counties.
- There are little in the way of ethnic/racial differences regarding support for the revenue enhancement options of legalizing and then taxing the sale of marijuana and of increasing the tax on cigarettes and tobacco. In the former case, Anglos (62\%), African Americans (64\%), and Latinos (64\%) support the reform in nearly identical proportions.
- Regarding the legalization and taxation of marijuana, younger voters are most supportive with $70 \%$ of millennials in support while $62 \%$ of Gen X, $60 \%$ of baby boomers, and $41 \%$ of the silent generation following.
- While $80 \%$ and $71 \%$ of Democrats respectively support the legalization and taxation of casino gambling and the recreational sale and use of marijuana, only $55 \%$ and $44 \%$ of Republicans are in favor of these respective reforms.
- A substantial partisan divide exists on reinstating taxes on oil and gas extraction, with over two-thirds (68\%) of Democrats and less than half of Republicans (49\%) supportive of returning the oil and natural gas severance tax to the higher levels used in the early 1990s.
- While a majority of all ethnic/racial groups oppose a sales tax increase, African Americans (64\%) and Latinos (61\%) are significantly more likely than Anglos (52\%) to be in opposition. In contrast, no noteworthy differences of opposition exist between Democrats (54\%) and Republicans (55\%).
- While a majority of the members of all major ethnic/racial sub-groups oppose a state income tax, opposition is significantly higher among Anglos (82\%) and Latinos (74\%) than among African Americans (59\%).
- Among the four generations, the only notable difference is between members of Gen-X who prioritize school safety spending the least (63\%) and Baby Boomers who prioritize it the most (74\%).
- Significant regional differences exist in prioritizing additional funding for schools with a high percentage of low income students. In the urban border (75\%), core urban ( $72 \%$ ), and suburban ( $68 \%$ ) counties more than two-thirds of residents prioritized more funding for these schools compared to the notably lower proportions in the mid-size regional hub (60\%) and rural (57\%) counties.
- While 74\% of African Americans and 72\% of Latinos believe additional funding for schools with a high percentage of low income students should be a priority, this position is shared by only $56 \%$ of Anglos.
- Almost nine out of ten Democrats ranked more funding for low income schools as a priority while only $50 \%$ of Republicans did the same.
- Three out of four Millennials support increased spending on schools with a high enrollment of low-income students compared to $31 \%$ of Gen X, $64 \%$ of baby boomers, and $61 \%$ of the silent generation.
- Deep partisan differences divide Texans on the issue of using additional funding to support an across-the-board pay raise for school support staff, with $81 \%$ of Democrats and $49 \%$ of Republicans in support.
- African Americans (78\%) were significantly more likely than Latinos ( $66 \%$ ) who were in turn also significantly more likely than Anglos (58\%) to prioritize additional spending to expand early childhood education programs and kindergarten for all. Similar partisan differences exist, with Democrats (84\%) twice as likely to prioritize this expansion as Republicans (42\%), one of the most substantial sub-group gaps for any spending item.
- African Americans (59\%) were the ethnic/racial group most likely to prioritize additional funding for bilingual education, followed by Latinos (54\%) and Anglos (37\%).
- Profound partisan differences are found in opinions about the expansion of bilingual education programs, with $63 \%$ of Democrats rating it as high or very high priority for additional funding compared to only $23 \%$ of Republicans.
- A solid majority (57\%) of younger voters say increased spending on bilingual is a high priority while only one in three oldest voters agree.
- Democrats (52\%) were significantly more likely to prioritize additional funding being directed to extracurricular activities than were Republicans (28\%).

## SUPPORT FOR/OPPOSITION TO PROPERTY TAX CAPS

The survey asked about support for legislation requiring any school district, city, county, or other taxing entity whose budgeted annual property tax revenue increased by more than either $2.5 \%$ or $5 \%$ to obtain voter approval for the increase. More than three out of four (77\%) of Texans strongly support or support imposing a revenue cap, while $23 \%$ oppose or strongly oppose.

Revenue cap support ranges from a high of $84 \%$ among rural Texans to a low of $72 \%$ among those in the major metro core counties of Bexar, Dallas, Harris, Tarrant, and Travis. In other words, even in the major metro core counties where high-profile elected officials have vigorously opposed the caps, more than two out of three registered voters support the caps.

We found support from the following subgroups:

- $81 \%$ of voters in suburban counties,
- $80 \%$ of voters in mid-size regional hub counties, with
- Support in the urban border counties only slightly lower at $76 \%$.

The strong support in rapidly growing suburban counties is especially noteworthy since that is where cities, counties, and school districts are likely to face the most pressure from a revenue cap in the future given their rapidly expanding needs for more roads, public services, and school campuses.

Opinion on Bill to Slow Growth of Property Taxes

Virtually every member of the Silent Generation (89\%) is supportive of revenue caps, followed by identical proportions (78\%) of Baby Boomers and Gen-X in favor. Support was moderately lower, at $72 \%$, among Millennials and Post-Millennials, still quite high given that only $42 \%$ are homeowners, who are most directly affected by rising property taxes, compared to the $74 \%$ of the older generations who are homeowners.

Opinion on Bill to Slow Growth of Property Taxes

There were no dramatic ethnic/racial differences in support for the revenue caps. Support ranged from a low of $73 \%$ among Latinos to a high of $84 \%$ among African Americans, with $77 \%$ of Anglos supportive. While a substantial majority of both Democrats (66\%) and Republicans ( $90 \%$ ) support the legislation, Republican support was significantly greater than the Democratic support.

Opinion on Bill to Slow Growth of Property Taxes

Opinion on Bill to Slow Growth of Property Taxes

Overall, $92 \%$ of Anglo Republicans and $84 \%$ of Latino Republicans support property tax revenue cap legislation. Among Democrats, however, support for the revenue cap differs substantially by ethnicity/race, with $85 \%$ of African American Democrats and $72 \%$ of Latino Democrats in favor of the cap legislation, compared to only 56\% of Anglo Democrats. Overall, the position of African American Democrats is much closer to that of both Anglo and Latino Republicans than it is to the position of Anglo Democrats. Latino Democrats are closer to Latino Republicans in their support for revenue caps than they are to the position of Anglo Democrats.

## SUPPORT FOR CLOSING CORPORATE APPRAISAL LOOPHOLES

Three out of four (75\%) Texans support legislation that would close current loopholes in the state's appraisal legislation that allow large companies and corporations to avoid paying taxes on the actual value of their property. A mere $12 \%$ of Texas voters oppose this reform with the remaining $13 \%$ holding a neutral position.

Support for the closing of these loopholes is robust across all five types of counties, with the most support in urban core ( $78 \%$ ) and suburban ( $78 \%$ ) counties and the least support in rural counties $(70 \%)$, with the latter support still representing more than two-thirds of voters.

Close Tax Loopholes on Large Companies

Generational support for closing the loopholes ranges from a high of $81 \%$ among the members of the Silent Generation to a low of $70 \%$ among Millennials and Post-Millennials, with the Boomer ( $78 \%$ ) and Gen-X ( $76 \%$ ) generations in between. In all cases, more than two-thirds of the members of every generation support the closing of the loopholes.

Close Tax Loopholes on Large Companies

While more than two-thirds in every ethnic/racial group supporting the closing of corporate loopholes, the support is moderately higher among Anglos (79\%) and African Americans (76\%) than among Latinos (68\%). In a similar respect, more than two-thirds of both Democrats and Republicans support closing these loopholes, but this support is significantly more robust among Democrats (85\%) than among Republicans (68\%).

Close Tax Loopholes on Large Companies

Close Tax Loopholes on Large Companies

## SUPPORT FOR/OPPOSITION TO FOUR 'SIN’ TAXES

A majority of Texans support different types of 'sin' taxes. In two cases, a majority supports legalizing an activity (casino gambling and the sale and consumption of recreational marijuana) and then taxing this activity while in two other cases a majority supports increasing the current tax; respectively, on beer, wine and alcohol, and on cigarettes and other tobacco products.

The most popular sin tax related revenue enhancement is to increase the tax on cigarettes and other tobacco products. This tax increase is favored by $68 \%$ of Texans and opposed by only $18 \%$, with $14 \%$ having a neutral position.

The next two most popular sin tax-related revenue enhancements are to legalize casino gambling and to legalize the recreational sale and consumption of marijuana and then to tax these activities. In both cases $62 \%$ of Texans support the reform while $28 \%$ oppose the legalization and taxation of marijuana and a mere $19 \%$ oppose the legalization and taxation of casino gambling. A total of $10 \%$ and $19 \%$ of Texans have a neutral position on these reforms, respectively.

The least popular sin tax reform would increase the tax on beer, wine, and alcohol. A bare majority of $53 \%$ supports this reform versus $27 \%$ who oppose it, with $20 \%$ possessing a neutral position.

There are little in the way of regional differences in support for legalizing and taxing casino gambling. In contrast, there are significant regional differences in support for the legalization and taxation of marijuana, with support lowest (albeit still above $50 \%$ ) in the midsize regional hub counties ( $52 \%$ ) and in the urban border ( $57 \%$ ) and rural ( $57 \%$ ) counties, and highest in the urban core ( $68 \%$ ) and suburban ( $63 \%$ ) counties.

Legalize and Tax Gambling

Legalize and Tax Recreational Marijuana

An increase in the cigarette tax has the most support in the suburban (79\%) urban border ( $74 \%$ ) and urban core ( $74 \%$ ) counties, support which is significantly greater than that found in the mid-size regional hub ( $55 \%$ ) and rural ( $59 \%$ ) counties. The only instance where a majority of a region does not support a 'sin tax' revenue enhancement is in the case of an increase in the beer, wine and alcohol tax the mid-size regional hub counties where only $45 \%$ support the tax (vs. $22 \%$ who oppose it). In the other regions, a larger proportion of the population supports an increase in the tax, ranging from $50 \%$ in the urban core counties to $61 \%$ in the suburban counties.

Increase Tax on Cigarettes and Tobacco

Alcohol and Spirits

One common thread among the generations is that the members of the Baby Boomer and Gen$X$ generations have very similar positions in regard to the sin taxes on casino gambling (61\%, $64 \%$ ), marijuana ( $60 \%$, $64 \%$ ), cigarettes and tobacco ( $67 \%, 67 \%$ ), and alcohol ( $54 \%, 52 \%$ ). In contrast, support for three of the taxes (cigarettes [78\%], gambling [71\%], and alcohol [64\%]) is significantly higher among members of the Silent Generation than among the members of the other three generations, and support for one tax (marijuana [41\%]) is significantly lower. Millennials and Post-Millennials have support levels for taxes on gambling (62\%), cigarettes ( $67 \%$ ), and alcohol ( $48 \%$ ) that are in line with those of the Boomer and Gen-X Generations, and register the highest level of support for the legalization and taxation of the recreational sale and use of marijuana (70\%).

Legalize and Tax Gambling

Legalize and Tax Recreational Marijuana

Increase Tax on Cigarettes and Tobacco

Alcohol and Spirits

There are little in the way of ethnic/racial differences regarding support for the revenue enhancement options of legalizing and then taxing the sale of marijuana and of increasing the tax on cigarettes and tobacco. In the former case, Anglos (62\%), African Americans (64\%), and Latinos (64\%) support the reform in nearly identical proportions. The same is true to a slightly lesser extent in regard to support for an increase in the cigarette/tobacco tax: Latinos (71\%), Anglos (67\%), and African Americans (65\%).

Legalize and Tax Recreational Marijuana

Increase Tax on Cigarettes and Tobacco

Strongly Oppose

Somewhat Oppose

Do Not Have an Opinion

Strongly Support

In contrast, notable differences exist between one or more ethnic/racial groups in their support for the legalization and taxation of casino gambling and for increasing the tax on beer, wine and alcohol. The legalization of casino gambling is supported by $67 \%$ of African Americans, but by only $57 \%$ of Latinos, with Anglos occupying an intermediate position (60\%). A reverse pattern is detected in support for an increase in the tax on beer, wine and alcohol, with Latinos being the most supportive of the reform (59\%) and African Americans the least supportive (46\%), with Anglos again in the middle (52\%).

Legalize and Tax Gambling

Alcohol and Spirits

Frequencies are rounded to the nearest whole numbers. Percentages are rounded to the nearest tenth.

Democrats and Republicans are in relative agreement regarding revenue enhancement reforms that would increase the tax on cigarettes and other tobacco products and increase the tax on beer, wine and alcohol. In all, 65\% of Republicans support tax increases on cigarettes and products, compared to $73 \%$ of Democrats; $55 \%$ of Democrats and $53 \%$ of Republicans support increasing taxes on alcohol and spirits.

Increase Tax on Cigarettes and Tobacco

## Alcohol and Spirits

Somewhat Oppose Do Not Have an Opinion

Substantial partisan differences, however, exist on the two reforms that involve legalizing and then taxing activity that is presently illegal in the Lone Star State. While 80\% and 71\% of Democrats respectively support the legalization and taxation of casino gambling and the recreational sale and use of marijuana, only $55 \%$ and $44 \%$ of Republicans are in favor of these respective reforms, with $44 \%$ of Republicans opposing the legalization of marijuana.

Legalize and Tax Gambling

Legalize and Tax Recreational Marijuana

## SUPPORT FOR AN EFFECTIVE INCREASE IN THE OIL \& GAS SEVERANCE TAX

One last revenue enhancement option for public schools that has majority support among Texas registered voters is an increase in the oil and natural gas severance tax (returning the rules governing taxation to their 1995 levels prior to when the Texas Legislature reduced the revenue burden on oil and natural gas in the midst of a slump) that has the support of $56 \%$ of registered voters, with only $18 \%$ in opposition.

The range of support across the five different types of counties is not dramatic, but does reflect some regional variation with the residents of the suburban (64\%) counties being the most supportive of the tax and the residents of mid-size regional hub (48\%) counties being the least supportive, with the other three county types' residents ranging in support from $54 \%$ to $56 \%$.

Reinstate Taxes on Oil and Gas Extraction

No notable generational differences exist in support for increasing the effective severance taxes on oil and natural gas. The proportion of support ranges from $55 \%$ to $57 \%$ across the four generations.

## Reinstate Taxes on Oil and Gas Extraction

Anglos (60\%) and African Americans (56\%) possess similar levels of support for this effective tax increase, values that are significantly greater than those found among Latinos (46\%). A substantial partisan divide exists on this reform, with over two-thirds ( $68 \%$ ) of Democrats and less than half of Republicans (49\%) supportive of returning the state of play in oil and natural gas severance taxation to the higher levels in the early 1990s.

Reinstate Taxes on Oil and Gas Extraction

Reinstate Taxes on Oil and Gas Extraction

## OPPOSITION TO/SUPPORT FOR A STATE SALES TAX INCREASE

Texans were queried about their support for a one-half cent state sales tax increase (that is, half the proposed increase) from 6.25 cents per dollar to 6.75 cents per dollar to help make up the revenue formerly provided via property taxes. As a group, $56 \%$ of Texans oppose the increase, while only $25 \%$ support it; $19 \%$ are neutral.

Opposition is highest in the mid-size regional hub counties - with $63 \%$ opposed, and in the urban border counties, where $62 \%$ opposed. Opposition is lower, at $54 \%$, in the major metro core counties, and in the rural counties and the suburban counties, where $53 \%$ oppose the increase.

However, in all five regions, a majority of voters oppose a sales tax increase of one-half cent. There is no part of the state where even one-third of the population supports an increase.

Three of the four generations have very similar levels of opposition to a state sales tax increase: Baby Boomers (53\%), Millennials and Post-Millennials (55\%), and Gen-X (57\%). The one outlier is the Silent Generation (65\%).

Sales Tax

While a majority of all ethnic/racial groups oppose a sales tax increase, African Americans (64\%) and Latinos (61\%) are significantly more likely than Anglos (52\%) to be in opposition. In contrast, no noteworthy differences of opposition exist between Democrats (54\%) and Republicans (55\%). And, as was the case in the prior categories, less than one-third of all ethnic/racial or partisan sub-groups support an increase.

Sales Tax

Sales Tax

## ADDITIONAL UNPOPULAR REVENUE ENHANCEMENT OPTIONS

The least popular reform designed to increase revenue to support public schools was the adoption of a state income tax that was opposed by $76 \%$ of registered voters and supported by only $12 \%$. Also very unpopular was the option of introducing a $1 \%$ tax on groceries (which are currently exempt from sales tax), which was opposed by $65 \%$ and supported by $21 \%$. Finally, $54 \%$ of Texans opposed ending the current sales tax exemption enjoyed by non-prescription drugs, a reform that was supported by $27 \%$ of registered voters. Since the latter two tax proposals have not received much attention during the 2019 legislative session in Texas, they are not discussed in detail here.

Opposition to a state personal income tax is strong across all of Texas, with the core urban ( $71 \%$ ), border urban ( $71 \%$ ), and suburban ( $73 \%$ ) counties possessing comparable opposition, and with opposition moderately higher in the mid-size regional hub (78\%) counties, and significantly higher in the rural ( $86 \%$ ) counties.

Adopt a State Income Tax

Opposition to a state personal income tax is highest among the Silent Generation where 19 out of 20 ( $95 \%$ ) oppose a state income tax. Opposition is lowest ( $63 \%$ ) among members of the Millennial and Post Millennial generations, with more than four-fifths of the Boomer (83\%) and Gen-X (81\%) generations against a state income tax.

Adopt a State Income Tax

Strongly Oppose

Somewhat Oppose
Do Not Have an Opinion
Somewhat Support
Strongly Support

While a majority of the members of all major ethnic/racial sub-groups oppose a state income tax, opposition is significantly higher among Anglos (82\%) and Latinos (74\%) than among African Americans (59\%). Almost nine out of ten Republicans (87\%) oppose a state income tax, in contrast to a little more than six out of ten Democrats ( $61 \%$ ). This underscores a significant gap between the two parties, but also one where substantial majorities oppose an income tax and only small minorities (19\% of Democrats and 7\% of Republicans) support a state income tax.

Adopt a State Income Tax

## SCHOOL SPENDING ITEMS

The respondents were asked what level of priority for additional spending they would give to seven different options in the event that the Texas Legislature were to increase funding for public K-12 education. The seven options include school safety, poorer districts, teacher raises, school staff raises, kindergarten for all, bilingual education, and extracurricular activities.

Two spending reforms were rated as a very high or high priority by more than two-thirds of Texans. In all, $69 \%$ believed that funding to enhance school safety was a high or very high priority and $68 \%$ felt similarly about providing additional funding for school districts with high percentages of low-income students.

A substantial majority of Texans considered it a very high or high priority to provide an across-the-board $\$ 5,000$ raise for all classroom teachers and librarians (66\%), provide an across-the-board pay raise for school support staff such as teacher aides, counselors and nurses (64\%), and expand early childhood education programs and kindergarten for all (62\%).

The expansion of bilingual programs and extracurricular activities is not a very high or high priority among Texas registered voters. Only 43\% prioritize additional funds to expand bilingual educational programs for students whose first language is not English and 40\% prioritize an increase in funding for extracurricular activities. In the case of these two reforms, $37 \%$ and $30 \%$ of respondents labeled these as low or very low priorities, with the remaining $20 \%$ and $30 \%$ indicating that they believed the reform was neither a high nor low priority.

## SUB-GROUP OPINIONS ON SPENDING

We next examine differences among the regional, generational, ethnic/racial, and partisan sub-groups in the extent to which they prioritize the seven options for additional spending.

## Enhancing School Safety

There are no notable regional differences in the prioritization of expanded spending on school safety with all but one region, mid-size regional hubs (63\%) clustered between $68 \%$ and $72 \%$.

Higher Spending in School Safety

Among the four generations, the only notable difference is between members of Gen-X who prioritize school safety spending the least (63\%) and Baby Boomers who prioritize it the most (74\%).

Higher Spending in School Safety

African Americans (76\%) are the most likely to prioritize enhanced school safety spending and Anglos the least likely (67\%), but even in the case of Anglos more than two-thirds prioritize more spending on school safety.

Higher Spending in School Safety

Finally, there is not much in the way of partisan differences in the priority given to school safety, with Republicans (72\%) prioritizing school safety only slightly more than Democrats (67\%).

Higher Spending in School Safety

## Additional Funding for Schools with High Percentages of Low Income Students

Significant regional differences exist in prioritizing additional funding for schools with a high percentage of low income students. In the urban border (75\%), core urban (72\%), and suburban (68\%) counties more than two-thirds of residents prioritized more funding for these schools compared to the notably lower proportions in the mid-size regional hub (60\%) and rural (57\%) counties.

Higher Spending in Poorer Districts

Similarly, while three-quarters of Millennials and Post Millennials (75\%) prioritize additional funding for low income schools, between two-fifths (Silent Generation, 61\%) and two-thirds (Gen-X, 67\%) share this opinion.

Higher Spending in Poorer Districts

A similar substantial difference exists in terms of ethnicity/race. While 74\% of African Americans and $72 \%$ of Latinos believe additional funding for schools with a high percentage of low income students should be a priority, this position is shared by only $56 \%$ of Anglos, a value that is significantly lower.

Higher Spending in Poorer Districts

And, the differences are even starker when the partisanship of the respondent is examined. Almost nine out of ten Democrats ranked more funding for low income schools as a priority, only $50 \%$ of Republicans did the same.

Higher Spending in Poorer Districts

Prioritizing the $\$ \mathbf{5 , 0 0 0}$ Raise for Classroom Teachers and Librarians
No notable regional differences exist in support for the $\$ 5,000$ raise, with the proportion rating the raise a priority ranging from $57 \%$ in urban border counties to $60 \%$ in the rural and core urban counties.

Provide a \$5,000 raise for all classroom teachers

In a similar vein, Texans of different generations are comparable in the extent to which the prioritize using additional funds to support a $\$ 5,000$ raise for teachers, with modest differences listing the raise as a priority, ranging from $63 \%$ among members of the Silent Generation to $69 \%$ among the members of Gen-X.

Provide a $\$ 5,000$ raise for all classroom teachers

Differences are also modest among the state's three principal ethnic/racial groups. Anglos prioritize it at a level (65\%) that is slightly lower than that for African Americans (68\%) and Latinos (70\%).

Provide a $\$ 5,000$ raise for all classroom teachers

Finally, while a majority of both Democrats and Republicans rank the $\$ 5,000$ raise for teachers and librarians as a very high or high priority, the proportion of Democrats holding this position (68\%) is significantly higher than the comparable proportion of Republicans (55\%).

Provide a $\$ 5,000$ raise for all classroom teachers

## Across-The-Board Pay Raise for School Support Staff

Providing for an across-the-board pay raise for school support staff is a higher priority for the average resident of an urban core (69\%), border urban (65\%) and suburban (65\%) counties than it is for a mid-size regional hub (51\%) county.

Pay Raises for Support Staff

No notable generational differences exist on this issue, with the proportion listing the across-the-board raise for support staff ranging from 61\% among Baby Boomers to 67\% among Millennials and Post-Millennials.

Pay Raises for Support Staff

Ethnic/Racial differences, while present, are also not profound. African Americans (72\%) are the most likely to prioritize raises for support staff, and Anglos (62\%) the least likely, slightly lower than Latinos (64\%).

Pay Raises for Support Staff

Deep partisan differences divide Texans on this issue, with using additional funding to support an across-the-board pay raise for school support staff a priority for $81 \%$ of Democrats compared to only 49\% of Republicans.

Pay Raises for Support Staff

## Expand Early Childhood Education Programs \& Kindergarten for All

The regional differences in prioritization for additional funds toward the expansion of early childhood education programs and kindergarten for all largely parallel those found previously for additional funding for schools with a high percentage of low income students. A significantly greater proportion of residents of urban core (67\%), suburban (66\%), and border urban (62\%) counties prioritize additional spending in this area than residents of mid-size regional hubs (47\%). Contrary though to the case with funding for low-income schools, in this instance residents of rural counties occupy a more intermediate position (58\%) between the two extremes.

Higher Spending in Kindergarten for All

Millennials and Post-Millennials (68\%) were significantly more likely to rate kindergarten for all a priority than were members of the Silent Generation (51\%), with members of the Baby Boomer (59\%) and Gen-X (62\%) generations in between.

Higher Spending in Kindergarten for All

African Americans (78\%) were significantly more likely than Latinos (66\%) and Anglos (58\%) to prioritize additional spending to expand early childhood education programs and kindergarten for all. Similar partisan differences exist, with Democrats (84\%) twice as likely to prioritize this expansion as Republicans (42\%), one of the most substantial sub-group gaps for any spending item.

Higher Spending in Kindergarten for All

Higher Spending in Kindergarten for All

## Expand Bilingual Education Programs

There are significant regional differences in the priority placed on directing additional spending to support the expansion of bilingual education programs for students whose first language is not English. The highest priority for the expansion of bilingual education is found in the urban border counties (59\%), followed by the urban core ( $48 \%$ ) and suburban counties (40\%), with only in the urban border counties a majority of the population listing this expansion of bilingual education as a very high or high priority. In contrast, a mere $31 \%$ and $35 \%$ of the respective residents of mid-size regional hubs and rural counties listed this expansion as a priority.

Higher Spending in Bilingual Education

Substantial generational differences also exist in the prioritization of additional funding for bilingual education, with this expansion being a priority for $57 \%$ of Millennials and PostMillennials but for only $33 \%$ of the members of the Silent Generation, with the members of the Baby Boomer (37\%) and Gen-X (42\%) generations in between, though closer in preference to their forbearers than to their progeny.

Higher Spending in Bilingual Education

African Americans (59\%) were the ethnic/racial group most likely to prioritize additional funding for bilingual education, followed by Latinos (54\%) and Anglos (37\%). More Anglos rated it a low or very low priority (43\%) than as a high or very high priority, with $25 \%$ of Latinos also ranking expanded bilingual education as a low or very low priority.

Higher Spending in Bilingual Education

Profound partisan differences also exist on this item, with 63\% of Democrats rating the expansion of bilingual education programs as high or very high priority for additional funding compared to only $23 \%$ of Republicans, with three-fifths of Republicans (61\%) rating it as a low or very low priority.

Higher Spending in Bilingual Education

## Additional Funding for Extra-Curricular Activities

Reflecting the generally greater prioritization of spending increases overall, urban core (44\%), suburban (42\%) and urban border (42\%) counties rated additional funding for extra-curricular activities to be a very high or high priority, compared to $33 \%$ and $31 \%$ in the rural and mid-size regional hub counties.

Higher Spending in Extracurricular Activities

Substantial generational differences exist on this topic. Extra-curricular funding was rated as a high or very high priority by $54 \%$ of Millennials and Post-Millennials, twice the proportion found for the Silent Generation (26\%) and also significantly more than found among the Baby Boomer (32\%) and Gen-X (39\%) cohorts.

Higher Spending in Extracurricular Activities

African Americans (58\%) were significantly more likely to prioritize additional funding being steered toward more extra-curricular spending than Latinos (47\%) who in turn were also significantly more likely to prioritize it than Anglos (34\%).

Higher Spending in Extracurricular Activities

Democrats (52\%) were significantly more likely to prioritize additional funding being directed to extra-curricular activities than were Republicans (28\%) by an almost two to one margin.

Higher Spending in Extracurricular Activities

## WILLINGNESS TO PAY FOR EDUCATION SERVICES

In addition to prioritizing spending among the educational options previously discussed, this study includes an investigation of the respondents' willingness to pay for different types of educational services using conjoint analysis. Conjoint analysis is a quantitative research method to measure the value of a specific option among respondents by considering options jointly rather than individually. The respondents were provided two hypothetical policy proposals. They were then required to compare the two proposals and choose the one they prefer. Each proposal consists of two random educational services funded by one of seven types of sources.

There is a total of six proposed educational services: (1) provide a $\$ 5,000$ raise for all classroom teachers; (2) increase funding for extracurricular activities; (3) increase state funding for school safety; (4) expand early childhood education and kindergarten for all; (5)
provide additional funding for districts with high percentages of low-income students; and (6) expand bilingual educational for students whose first language is not English.

Moreover, there are seven types of funding sources: (1) No tax increase; (2) $0.1 \%$ increase in property tax (extra $\$ 200$ tax per year for a $\$ 225,000$ house); (3) $0.2 \%$ increase in property tax (extra $\$ 400$ tax per year for a $\$ 225,000$ house); (4) $0.3 \%$ increase in property tax (extra $\$ 600$ tax per year for a $\$ 225,000$ house); (5) $0.5 \%$ increase in sales tax; (6) $1 \%$ increase in sales tax; and (7) $1.5 \%$ increase in sales tax.

Predicted Probabilities of Supporting Educational Services

The figure above illustrates the predicted probabilities of supporting six types of educational services given different levels of funding sources. The educational services are arranged based on their predicted probabilities in descending order. This figure shows that the predicted probabilities of supporting a $\$ 5,000$ raise for all classroom teachers are the highest among the list of proposed educational services, followed by providing additional funding for districts with high percentages of low-income students. On the other hand, the predicted probabilities of support for extracurricular activities are the lowest. In other words, the respondents highly support the proposed $\$ 5,000$ raise for all classroom teachers, whereas they consider additional funding of extracurricular activities to be the lowest priority.

To be more specific, the top-left bar chart in the figure shows the predicted probabilities of supporting a $\$ 5,000$ raise for all classroom teachers. The first four bars show that as the additional property tax rate increases from zero percent to $0.3 \%$, the probability of supporting the $\$ 5,000$ raise is decreasing from a probability of $72.6 \%$ to a probability of $51.6 \%$. An increase in sales tax also shows a similar pattern. The last four bars show that the sales tax increases from zero percent to $1.5 \%$ lowers the probability of supporting the $\$ 5,000$ raise from $72.6 \%$ to $53.2 \%$.

Providing additional funding for districts with high percentages of low-income students is the next popular educational service. At a zero property tax rate, the probability of support for funding low-income districts is $67.6 \%$. As the property tax rate increases from $0.1 \%$ to $0.3 \%$, its probability decreases from $58.7 \%$ to $46.7 \%$. Similarly, the sales tax rate increases from $0.5 \%$ to $1.5 \%$ reduces the probability of support from $58.9 \%$ to $48.3 \%$.

The respondents' preferences on spending extra resources on expanding early childhood education and kindergarten for all, and improving school safety are relatively similar. Given no tax increase, the predicted probability of expanding early childhood education and kindergarten for all is $65.5 \%$ whereas that of improving school safety is $60.1 \%$. Similar to the previous results, raising property tax rates and sales tax rates lower the popularities of both services. If the property tax rate increases from $0.1 \%$ to $0.3 \%$, the probability of supporting the expansion of early childhood education and kindergarten and the support for improving school safety decreases from $56.6 \%$ to $44.5 \%$, and from $51.9 \%$ to $39.9 \%$, respectively. If the sales tax rate increases from $0.5 \%$ to $1.5 \%$, the probability decreases from $56.7 \%$ to $46.1 \%$ (expanding early childhood education and kindergarten for all), and from $52.1 \%$ to $41.5 \%$ (improving school safety).

Finally, the survey shows that respondents give lower priority to expanding bilingual education for students whose first language is not English and increasing funding for extracurricular activities. Their patterns are similar, with the probabilities of support for bilingual education and extracurricular activities at a zero tax rate are $54.7 \%$ and $53.9 \%$, respectively. If the property tax rate is assumed to increase from $0.1 \%$ to $0.3 \%$, the probability decreases from $45.7 \%$ to $33.7 \%$ for the support for expanding bilingual education, and from $46.0 \%$ to $35.3 \%$ for the support for extracurricular activities. Similarly, the proposed sales tax increases from $0.5 \%$ to $1.5 \%$ lowers the probability of supporting the expansion of bilingual education from $46.0 \%$ to $35.3 \%$, and that of supporting the increasing funding for extracurricular activities from $45.1 \%$ to $34.5 \%$.
